1. Introduction

This is a software developed by java using **Android studio**. It is a e-commerce app project.

Customers can view and order the products from the app. Here customers can place orders and admin can add new products.

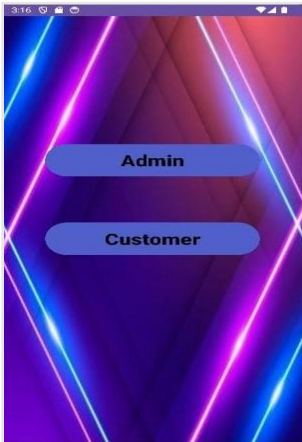

2. Description

Home Page

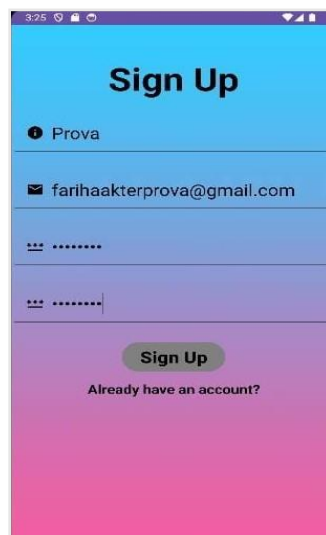

This is the home page of the app. User will see the page when they enter the app. By clicking on the “Welcome” button will take them to the next page.

Login page

We created 2 buttons for customer login and admin login. Click on the 'customer' button and go to the sign up page for user login.

Sign Up

Already have an account?

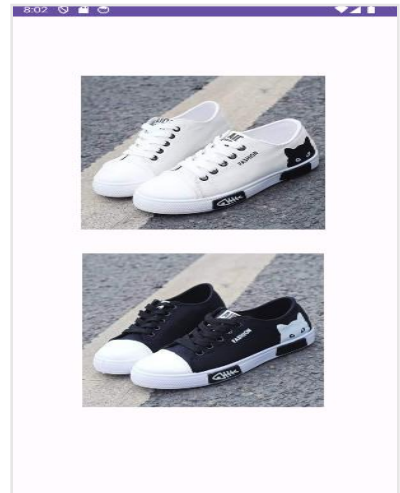

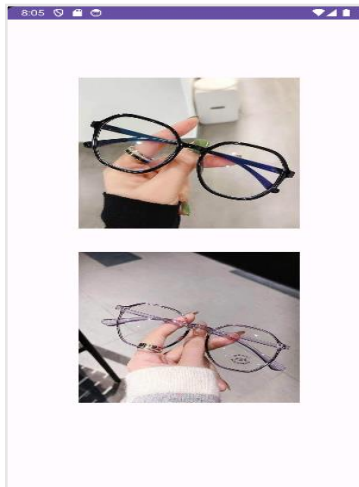

For sign up, users have to put their name, email and a strong password and click on the sign up button below.

Category

Now here is the page for category that a user can choose.

Orders

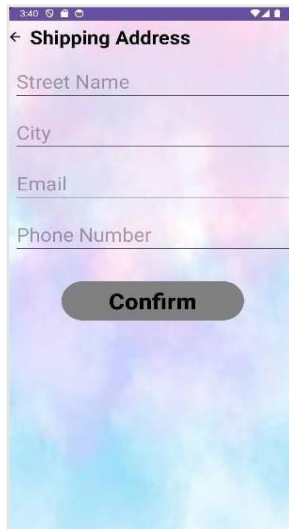

A customer can click on any products then the details of the product will be shown.

Place order

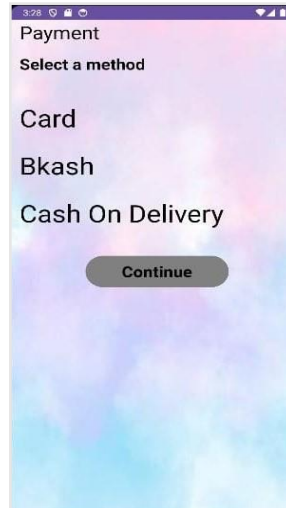

Here the customer can confirm the order.

Customer Details

A mobile app screen titled "Shipping Address" with a back arrow. It contains four input fields: "Street Name", "City", "Email", and "Phone Number". A "Confirm" button is at the bottom.

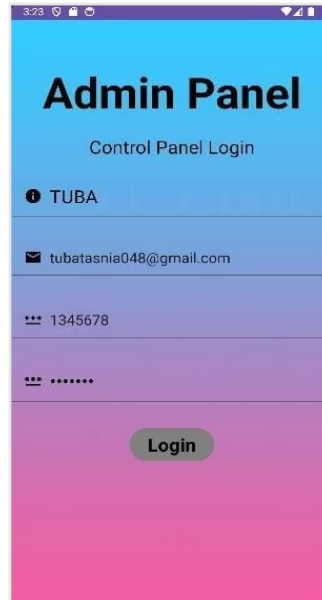

A mobile app screen titled "Payment" with the instruction "Select a method". It lists three options: "Card", "Bkash", and "Cash On Delivery". A "Continue" button is at the bottom.

After giving these details the order will be confirmed.

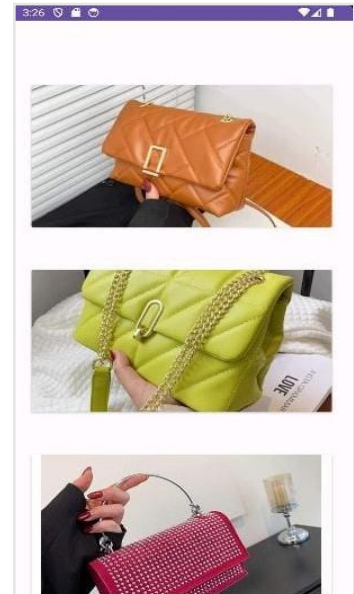

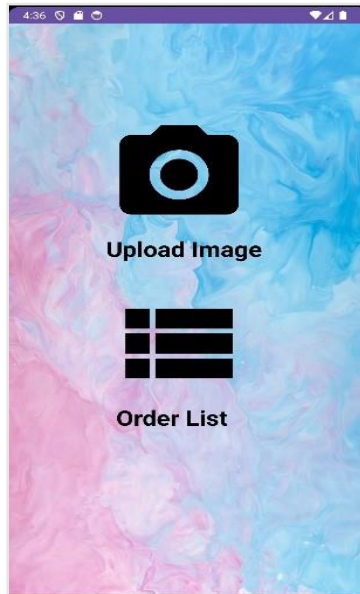

Admin login

Clicking on the admin login option from the login page, it will bring up the login page for admin login and an admin can login with their username and password.

Upload picture

After admin login, the admin can upload picture from their device. Just click on the + button, choose a photo and upload in any category section.

Order list

Order	Product	Price	Status
1	Bag 	990	Accept Reject
2	Glass 	650	Accept Reject
3	Bag 	950	Accept Reject

After a customer places an order it can be seen in the order list and admin can accept or reject any order by their choice.

3. Dependencies

1. **Java:** For build this project we use java language.
2. **Android Studio:** We used Android studio to build the project.
3. **Firebase:** The E-commerce app's database is stored in firebase server as Tube-light.
